

| POSSIBLE SOLUTIONS | RECOMMENDATION |
|--|--|
| Red light cameras at all traffic lights | Introduce red light cameras at all traffic lights, starting with the major freight routes. |
| Monitor road operating conditions | Implement a systematic major road network monitoring program and present information in an easy to understand way. |
| Transit lanes on South Street | DPI to undertake planning study of the implications of introducing transit lanes, or other forms of public transport priority, along South Street. Funds to be allocated to implementation, if found to be practical, just after opening Roe 7. |
| Reduce direct access to Leach Highway | Support the current policy of minimising direct (driveway) access to Leach Highway where practical. Where there are already large numbers of driveways, consider land redevelopment with alternative access if opportunities arise. |
